

About Us

Technology that connects intelligence,
people, and business

Founded in 1993, **Archeometra** is a solid and recognized presence in the Italian landscape of digital consulting. For over **thirty years**, we have supported companies and institutions in transformation and innovation projects, offering an approach that combines strategic vision, execution capability, and long-term continuity.

Our offices in **Rome** and **Treviso** host highly qualified teams who work with a strong focus on quality, sustainable results, and the building of long-term relationships.

Our commitment is to provide technical support to clients as they face the challenges of a rapidly changing global context.

Guided by a clear and consistent vision - turning technology into a concrete competitive advantage - we assist organizations in making their strategic choices operational, translating them into real, measurable, and sustainable results.

Our strength lies in our ability to ensure **rigorous execution, reliability, and precision**, transforming ideas and project guidelines into solutions that work, within the agreed timelines and costs. It is through this operational solidity that we generate lasting value for our clients.

We collaborate with national and international partners,
building relationships based on trust, expertise, and
responsibility.

Our commitment is to support companies in fully realizing their
digital future - with effective implementations, operational con-
tinuity, and constant attention to quality.

Our Target Markets

We operate in the main regulated sectors - **Energy, Financial Services, Public Administration, and Retail** - delivering complex projects involving integration, modernization, and the digitalization of core processes. We specialize in turning our clients' strategic choices into operational reality.

We work in Italy and across several European markets - including **Spain, the United Kingdom, the Netherlands, and Belgium** - ensuring the same level of reliability, rigor, and attention to security and compliance requirements that characterize the most demanding industries.

Our Clients

Over the years, we have built solid and long-lasting relationships with some of the leading players in the industrial and institutional landscape.

We maintain long-term collaborations with top-tier energy companies, including their international branches, delivering projects distinguished by high complexity, continuity over time, and a strong focus on the evolution of the energy sector across the entire value chain.

We are also technology partners of key institutions within the Italian Public Administration, including the Ministry of Economy and Finance and the National Statistical Institute, and we work on enterprise-class projects with U.S. financial institutions ranked among the top Fortune 100.

Our Skills

Our know-how stems from a **multidisciplinary team** that works daily on highly complex initiatives, where service continuity, security, and coordination among multiple stakeholders are essential elements.

We are accustomed to managing demanding projects with significant impacts on infrastructures, processes and operations, while consistently **maintaining a rigorous, results-oriented approach**.

This enables us to confidently handle large-scale projects, ensuring quality and adherence to standards.

Our expertise covers the entire digital delivery lifecycle:

- **development and integration** of complex application solutions,
- **management and consolidation** of large-scale information assets,
- **design of digital platforms** focused on the user experience,
- **data governance and data enhancement** to support decision-making processes,
- **implementation of modern, scalable architectures** for high-demand operational environments.

SYNESY

Where AI and humanity come together

Synesy® was created from Archeometra's experience and vision as the brand that concentrates our expertise in **Artificial Intelligence and Data Intelligence**, with the goal of transforming complex information assets into concrete tools that support decision-making and operations.

Our philosophy is clear: to **develop human-centered AI solutions that simplify complexity and strengthen decision-making capabilities**. Synesy integrates generative AI, data governance, and advanced analytical methods to create technologies that are reliable, transparent, and sustainable.

The goal is an ecosystem in which artificial intelligence supports rather than replaces, providing tools that enhance the precision, speed, and consistency of processes. **We design solutions that organize and interpret large volumes of data, turning them into evidence that informs decisions.**

Governance, intelligence, performance

Gig-eff is a modular platform designed to integrate different Artificial Intelligence models, harmonize complex data, and ensure transparent interaction between people and systems.

It introduces an advanced model of AI governance that guarantees traceability of operations, cost control, and centralized model management, providing a level of oversight consistent with the requirements of the most regulated sectors.

The result is a scalable, interoperable, and secure platform capable of transforming critical information into concrete, reliable actions.

Every interaction is tailored to the user's role, responsibilities, and operational context.

Responses are not generic: they are relevant, consistent, and designed to support fast, informed decision-making.

giG-eff

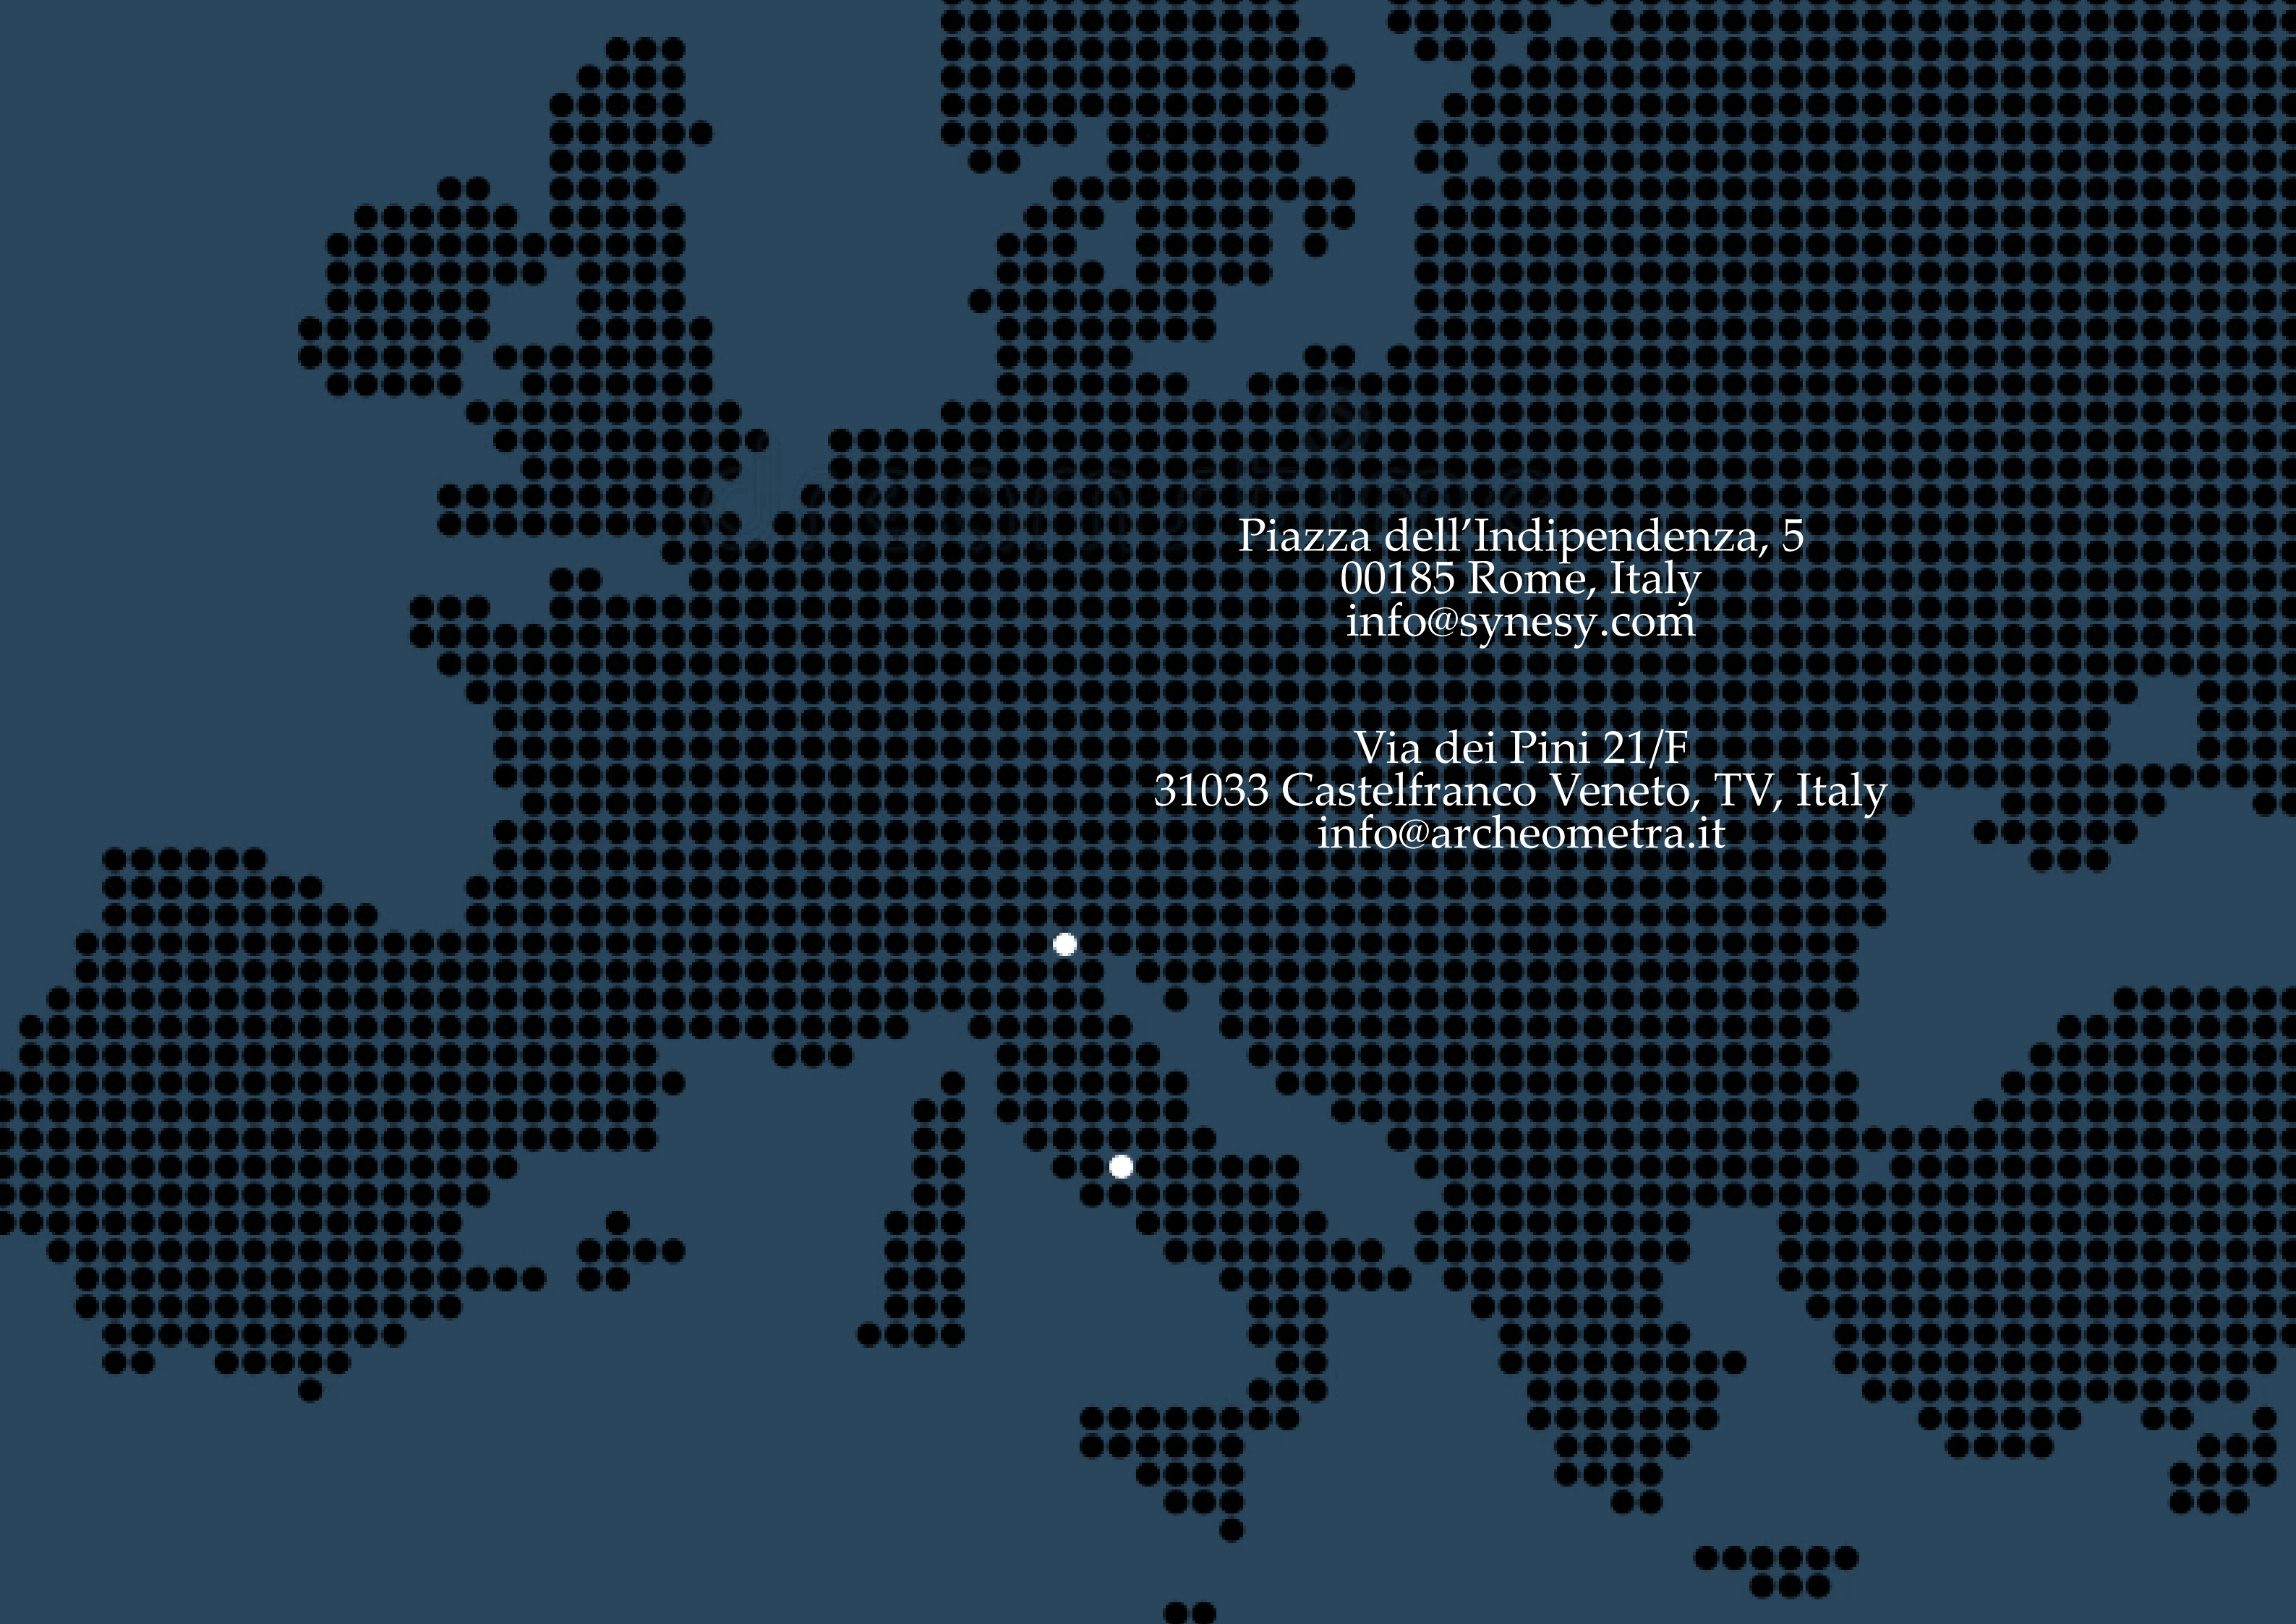

His Orbit. Your Intelligence.
Not above – beside.

We believe that true innovation arises from the convergence of technology, awareness, and ethics.

For us, to innovate means creating tools that understand context, respect people, and enhance the value of organizations.

Archeometra and Synesy embody two complementary dimensions of a single mission:

to build an intelligent, transparent, and human digital ecosystem.
